*Reasons for allowance*

1. This communication is in response to applicant's 02/13/2006 appeal brief in the application of Winters et al. for the "System and method for selecting a transmission channel in a wireless communication system that includes an adaptive antenna array" filed 02/13/2001.

Applicant's argument and remark with regard to the rejection under 35 USC 103 are persuasive.

Furthermore, the rejections of record under 35 USC 103 of claims 1-22 are withdrawn as evidence by discussion follows.

2. Claims 1-22 are allowable.

3. The following is an examiner's statement of reasons for allowance: The instant application is deemed to be directed to a no obvious improvement over the prior art of record. The improvement comprises: A wireless communication system comprising a receiver having an adaptive array, the adaptive array having at least two antennas to receive a signal and produce at least two received signals; a transmitter having at least two transmission channels for communicating the signal from the transmitter to the receiver; means for suppressing interference at the receiver by applying an interference suppression technique when combining said at least two received signals; and means for selecting a channel at the transmitter based on channel performance at the receiver for each of said at least two transmission channels, the channel performance based on a combining technique different from the interference suppression technique, as specifically recited in the claims.
